

S M L[®] DIGITAL

IT'S A DIGITAL WORLD... **AND WE'RE YOUR DIGITAL LAB**

SML Digital is committed to supporting your digital practice and ready to receive your digital files. Simply upload your digital files to our new SML Digital Portal and choose from a wide range of services.

OPPORTUNITY

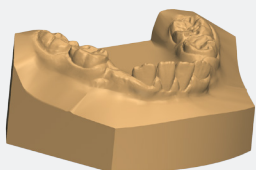

The most obvious case for embracing the latest digital impression technology is *patient comfort*. Patients simply do not like having an impression taken.

With a *digital* impression – the dentition is scanned intra-orally. No more chair-side drama. No more patients squirming uncomfortably in the chair. No high anxiety, no gag reflex...

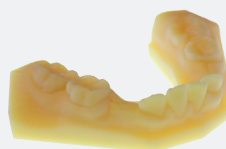

No more physical models. No storage space required. No chance of valuable models getting lost or damaged. We'll keep your scan, we'll keep your records...and if you need a new model or new appliance, we'll get it made.

APPLIANCE FABRICATION

SML can print your digital impressions into a physical working model. The printed model can then be used for appliance fabrication.

• Complete Ortho Records Packages	
• Orthodontic Diagnostic Service	\$349.99
• Inman Aligner IPR Analysis and Digital Models	\$30.00 per arch
• Powerprox IPR Analysis and Digital Models	\$66.75 per arch

Cephalometric Tracing

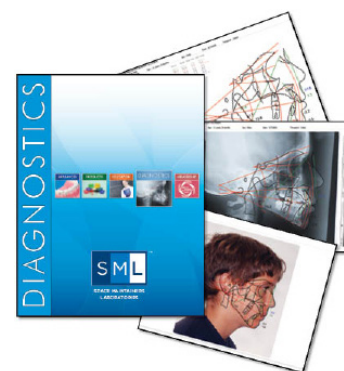

When you are deciding on a treatment plan for your patient, you want all the information...and with today's dental/legal record requirements, complete case diagnostic documentation is not just important, it's essential.

This is where SML can help. We take your patient's cephalometric records, create an accurate, organized, easy-to-understand report, and then return it to you via our secure digital portal.

In addition, we have the ability to superimpose the cephalometric tracing directly over the cephalometric film and/or soft tissue profile photograph -- giving you the ability to relate the tracing to both the patient's skeletal and soft tissue profile. This visual aid enhances your patient/parent consultations and provides additional information for case documentation.

Highlights:

- SML accepts either digital or traditional film cephalometric x-rays and creates a digital report.
- SML can, when requested, return your digital reports in a printed format.
- SML saves you time, freeing you and your staff to attend to other important duties.
- SML delivers precise, highly accurate tracings in comparison to 'hand-traced' cephs.

Complete Ortho Records Packages

Now you can have all your orthodontic records completed and returned to your office in a digital format for individual case review.

This complete package includes everything you need to present the case to your patient (and parents) -- including that sale-essential professional appearance and important case documentation.

This service will help:

- Free up valuable office time for you and staff members
- Increase patient acceptance of treatment
- Develop your treatment plan
- Provide important case documentation

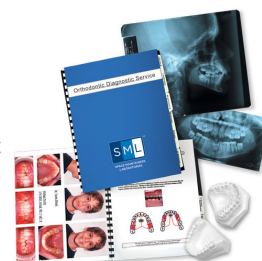

- Increase your income

Orthodontic Diagnostic Service A true "second opinion"

Knowing *what* cases to treat is as important as knowing *how*. SML provides you with a detailed comprehensive treatment plan which allows you to do *both*.

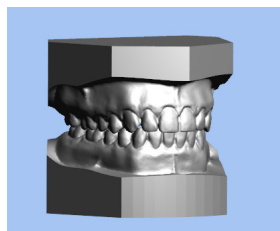

After a careful analysis of your records by our on-staff dentist, you will receive a true "second opinion" including:

- Cephalometric Analysis Report
- Model and Photographic Evaluation
- Photographic Layout
- "Patient Specific" Diagnosis and Treatment Plan
- Illustrated Appliance Designs
- Detailed "Step-By-Step" Appliance Adjustment Techniques and Sequencing Procedures
- Patient Instructions
- An Informed Consent Document
- Appliance Costs Breakdown
- Reference Information

All of this vital information is then returned to your office as a digital and/or printed report ready for your patient/parent consultation.

3D DIGITAL MODELS - ORTHOPIX

SML Digital Diagnostic Services provides you with ultra-accurate, high-resolution digital study models -- securely stored and backed up on our servers. You are assured rapid, on-demand retrieval -- no office storage space required. Viewing software is free of charge -- no set-up fees or start-up costs, either.

We can scan impressions or working models... and the viewing software is free of charge. No set-up fees or start up costs. We can also fabricate a set of plaster study models or an appliance if you wish.

FREE Digital Archiving	NO MORE Plaster-Cast Clutter
FREE Software	NO MORE Integration Headaches
FREE Shipping	NO MORE Proprietary Red Tape or Tiered Pricing
